

Assembly Instructions

1. Remove dog crate and place on floor with the plastic pan on bottom. Locate latch on side and open.
2. Using both hands, pull the top of the crate upwards until the crate becomes square.
3. Holding the top with one hand, reach inside and pull the door panel towards you (Fig. E). Secure door in place by using the clips located on both side panels and top panel. Repeat this for back panel.

Caution: Always remove collar and tags before placing your pet inside

Important Notice!

For safety reason,

- (1) Please make sure, when your pets use this product it must be accompanied by adult human.
- (2) For the puppy pen, please ensure that it is fixed into the ground for stable.

FREE DIVIDER PANEL

The divider panel allows you to separate the cage into two areas or make the cage smaller in length if it is too big for your pet. Usually pets will not eliminate in the area they sleep.

By using the divider panel it will allow one end for sleeping and the other end for eliminating. As your dog grows you can adjust the length of the cage by adjusting the divider panel. When your pet is full grown you can remove the divider panel.

Instructions for installing the divider panel

1. After assembling your Wire Crate unfold the divider panel and place it inside the crate through one of the two doors.
2. When you have decided on the position of the divider panel, attach the side panel with the two hooks to the vertical wire on the side of the crate that has the door.
3. Find the appropriate vertical wire on the opposite side of the crate and attach the divider panel hooks. (If side panel with multiple hooks is attached to the side with the door, the door will not operate.)

Remember to leave enough room for your pet to lie down.
